

Database::loadExtra

Database::loadMedium

Database::loadSmall

Graph::addEdge

```
graph LR; A[Database::loadExtra] --> D[Graph::addEdge]; B[Database::loadMedium] --> D; C[Database::loadSmall] --> D;
```

The diagram illustrates a flow where three database loading methods—Database::loadExtra, Database::loadMedium, and Database::loadSmall—all point to a single method, Graph::addEdge. The three source methods are arranged vertically on the left, each in a white box with a black border. The target method, Graph::addEdge, is in a gray box on the right. Blue arrows connect each source box to the target box, indicating that all three loading methods eventually result in an edge being added to the graph.
